50% of Plantation Sites will be randomly selected from each division from each APO year i.e. 2020-21, 2021-22 & 2022-23 which include Location where Plantations were carried out during concerned APO year and also include plantations of previous years, which are under maintenance of their third year (Fifth year of plantations) and Seventh year of maintenance (Ninth year of plantation) of the concerned APO year, in each category (current year, fifth year and ninth year) and 100% enumeration shall be carried out in the selected unit.

In case of Block Plantation for every hectare of plantation, the evaluation needs to be done on a representative plot of 33 m. X 33 m. Each plot needs to be marked on a map of plantation area, which needs to be attached with this sheet. The GPS coordinates of all such (33 m x 33 m) plots also need to be provided.

In case of linear plantation, evaluation of every 10th tree/planted sapling of each row needs to be done for 25% of its length on per running km. basis. Following format will be used for evaluation of survival percentage and condition of plantation.

Plot No.	GPS coordinates of centre of plot	No. of plants planted	Condition of plants		Avg. height of live plants (in cm.)	Avg. collar girth (in cm)
			No. of live plants	No. of dead plants
